PIONEERING LOGISTICS

Your company must be well positioned to take advantage of the speed and complexity of today's business world. We support you with our unique end-to-end portfolio covering your entire supply chain: from the perfect software solution to consulting and services to the right hardware. MHP Solution Group combines cross-sector expertise in logistics and intelligent business solutions from ten companies.

Take the decisive next step into the future of logistics with us.

SEE THE BIG PICTURE

We have the right solution for you and provide competent advice, at every stage of the supply chain.

CUSTOMS
Unlimited success in export and import. Use intelligent and stable customs software to control your external delivery processes, in full compliance with pertinent laws and requirements. → **P. 9**
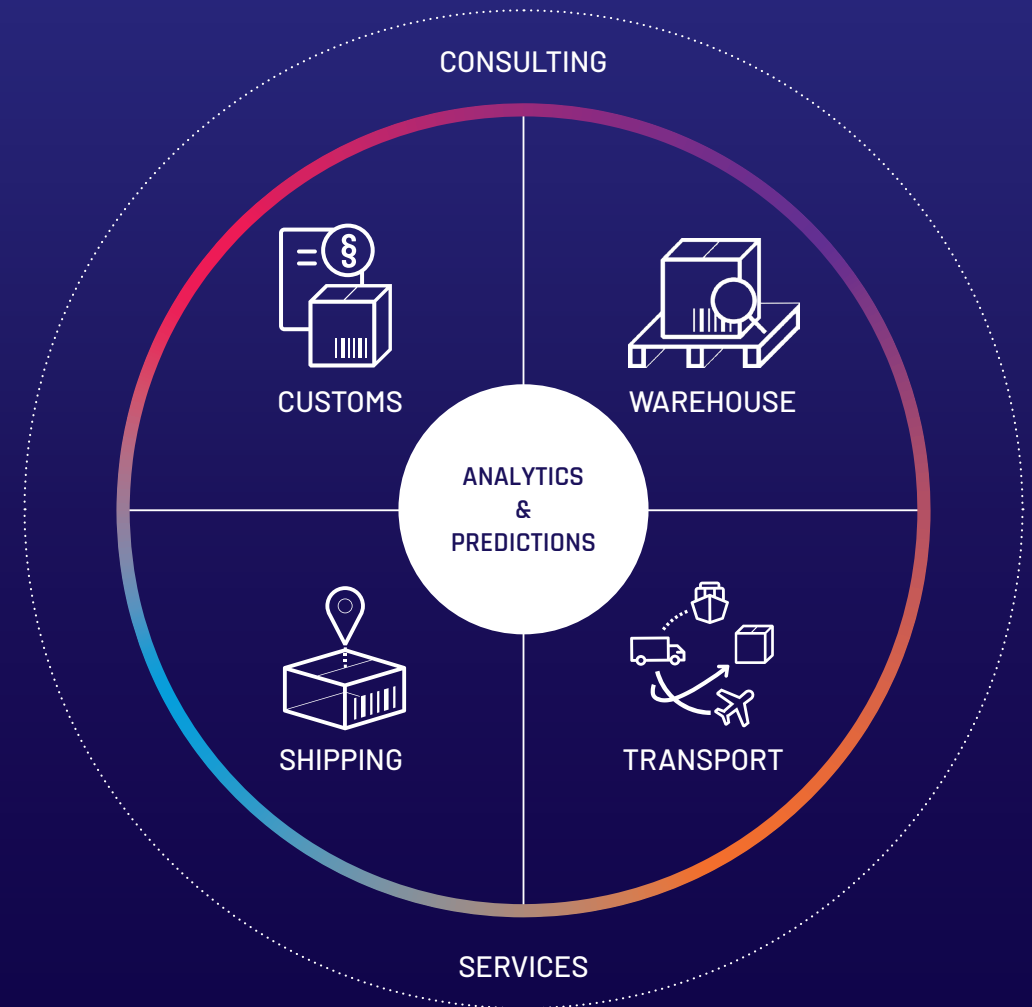

WAREHOUSE
Warehouse logistics at its best. Scalable and powerful warehouse management as well as a fast and secure flow of goods thanks to intelligently automated processes and high-performance hardware . → **P. 10**

SHIPPING
Data-driven multi-carrier shipping logistics for cost-effective and transparent delivery processes. Achieve the greatest possible flexibility and have your shipments under control at all times. → **P. 11**

TRANSPORT
With our TMS, your dispatchers have a clear view of the essentials. Gain more time for customers and drivers thanks to digitally controlled scheduling, planning, freight invoicing and controlling. → **P. 12**

Our comprehensive solution portfolio is based on years of industry expertise. We help you to optimize IT-supported processes along your supply chain to ensure that you can achieve your goals better and faster: with high-end products, future-oriented technologies and a tailored service and consulting offering. Integrated business intelligence solutions deliver comprehensive real-time analyses and forecasts of your process flows.

CLEAR PATHS WITH OUR DYNAMIC COMPLETE PACKAGE

In international trade, whether in export, import or preferential trade, it is important to keep up with the rules and regulations. When crossing borders, smooth customs clearance and compliance with all applicable requirements are essential.

Our dedicated customs solutions drive your foreign trade by enabling a secure management of your processes that is always compliant with regulations. Intelligently automated processes facilitate the import and export of goods, regardless of company size, shipping volume or industry. Intuitive graphical user interfaces further simplify the management and control of cross-border trade.

The customs software is fully certified for communication with the customs authorities. For products manufactured in house, you can easily determine the applicable limit for obtaining preferential treatment. The customs team provides comprehensive expert advice on how to use our products to optimally handle foreign trade processes and which of the automation options are suitable.

CUSTOMS

GET THE BEST OUT OF YOUR WAREHOUSE

Powerful software and hardware are essential for the smart management of inventories and logistics business processes. Intelligently automated workflows save you time, resources and costs, ensuring that you are equipped for the future.

Our proven warehouse management systems and their implementation are accompanied by a comprehensive range of consulting and services. Project planning and fully integrable hardware solutions, including mobile data acquisition devices, barcode scanners and label printers, round off the portfolio.

All systems and services are perfectly harmonized to fully exploit the optimization potential of the closely interlinked processes. The modules are as standardised as necessary and as flexible as possible to permit seamless integration into your company's existing structures and systems. We understand the management of complex projects, the networking of different software systems and the connection of automated warehouse technology. Our warehouse experts have many years of experience in intralogistics across all industries.

IN THE FAST LANE WITH MULTI-CARRIER SHIPPING SOFTWARE

Determine the speed of digitalized shipping logistics with our dedicated shipping products. Our powerful multicarrier shipping software offers you a system for about 200 carriers and enables the efficient handling of all shipping processes from one workstation.

Existing systems can easily be integrated with our solutions. Our experts will advise you on the optimal implementation. With our automated shipping software you control data and manage all documents centrally, ensuring that your parcels are on their way quickly and with optimized freight costs, regardless of how many parcels are processed in one day. Shipping and follow-up processes can be flexibly designed without affecting the release compatibility of the software.

We are constantly expanding our software with functions that are not covered by ERP systems to keep you up to date with current market requirements. The intelligent software solutions of MHP Solution Group for shipping, tracking and freight cost management work hand in hand and can be deployed both locally and in the cloud.

SHIPPING

SETTING NEW STANDARDS WITH DIGITAL TRANSPORT SOLUTIONS

Control your vehicles and flow of goods efficiently and transparently with our transport solutions. Our transport experts advise you across all processes and guarantee a smooth implementation.

By using our Transport Management Systems (TMS), you have all the information at hand to plan, control and continuously optimize your logistics processes and costs. The integration of all common ERP systems and the connection of customers via interface provides you with the best possible overview of order entry and management, fleet scheduling and automated route planning, as well as freight invoicing and controlling.

All of our solutions – transport, warehouse management, shipping and customs – are perfectly harmonized. Through integrated telematics interfaces, data from other business areas is automatically transferred back into the TMS. This central overview supports seamless shipment tracking and allows you to plan, manage and control your transport operations in real time.

Intelligent optimization of
value-added processes

MOVING MORE TOGETHER

MHP Solution Group combines competencies from all areas of logistics to design integrated logistics systems and optimize value-added processes. Equipped with detailed expertise and innovative solutions in the various logistics segments, we always keep sight of the big picture.

To us, the future of logistics lies in continous digital networking, automated data flows and intelligent systems that help you to stay ahead of the competition.

Shape the future
together with us.
We look forward to it!

> "MHP Solution Group gives us maximum flexibility in the design of business processes. We can rely 100% on their solutions and support, which enables us to adapt to any new customer within a matter of days."

CUSTOMIZED WAREHOUSE MANAGEMENT AS A VALUE PROPOSITION

The requirements of logistics provider FineCom's IT landscape are as diverse as its customers. A flexible and adaptable warehouse management system was therefore essential.

After a comprehensive evaluation phase, FineCom opted for xStorage by aisys, convinced by the open structure of the multi-client capable solution and the company's high-quality service. In addition, FineCom opted for the multi-carrier shipping software V-LOG from MHP Software and the hardware solutions from PANDA PRODUCTS.

With a shipping volume of around 30,000 packages, the efficiency and robustness of FineCom's IT landscape are put to the test every day. But the software and hardware of MHP Solution Group can keep up with the impressive growth of the company. For FineCom, the 700 percent increase in shipment volume over the past two years is down in large part to the intelligent interaction and flexibility of the solutions.

> "The integration of our longtime partner BNS into the MHP Solution Group is a real stroke of luck. We benefit from a unique service offering and have a single competent provider for all software solutions."

DIGITAL TRANSPORT ON TRACK FOR GROWTH

Logistics service provider Bode is a prime example of the successful integration of modern IT solutions. The freight forwarding company is continuously optimising and expanding its systems and uses solutions from the MHP Solution Group in all processes.

From data entry to invoicing, all tasks at Spedition Bode are handled with the OnRoad software from BNS. Truck drivers receive their order data through the integrated telematics solution, while at the same time, the dispatchers have position and status reports of all trucks and orders at their disposal. Customers and subcontractors are also included in the web-based real-time communication and can request the current shipment status.

Bode also uses MHP to process its global shipping. Based on the shipment data provided by OnRoad, MHP Software's multi-carrier shipping software V-LOG determines the appropriate service provider and automatically transfers the order to the carrier. For shipments outside the EU, Z-ATLAS from TIA handles the necessary customs declarations under the ATLAS procedure.
